AI Powered Game Customization Tool (No Code Approach)..

A web-based platform where users can customize playable games using natural language prompts, AI image generation (for reskinning) and game logic injection.

Now **more Features** added..

Features

- **Skin Customization using AI**

User can create new skins using natural language.

- **Game Logic injection via AI**

User can use natural language prompts to add new custom logic in the game.

- **Difficulty slider**

The website has a difficulty slider to tune the difficulty level.

- **5 Game templates**

It has 5 in-built game templates.

- **AI generated skin preview + Game preview**

Before making the game, the user can preview the skins in the preview section.

- **Downloadable Zip file**

The user can download a zip file consisting of the skins, html and js file. User can directly launch the HTML file and play the game

- **Fallback Mode(Default assets)**

Even if AI model return corrupted file or any error, the website will use its default assets to make a default game.

- **Mobile friendly (New)**

Now it makes mobile friendly games, where user can use touch screen to play.

- **Mobile Preview mode (New)**

The website now has a mobile preview mode where the user can use toggle to switch between mobile view and desktop view.

- **PWA support (New)**

The generated game is now installable as a mobile web app. Once installed, it runs offline like a native game!

- **Random Prompt (New)**

If user doesn't have any idea what to do, they can use the random prompt option which fills in a random prompt in the text area.

Tech Stacks

- Frontend - HTML, CSS, JavaScript
- Backend - Flask Python
- Image Generation - Stable Diffusion 3.5, Segmind AI
- Game Logic Injection - Deepseek Coder 6.7B, Segmind AI

Competitor Analysis

Scratch

- Requires Manual Block Logic.
- Does not work on natural language.

Roblox Studio

- Steep learning curve.

Unlike these, GameNXT gives creative control to non-coders to customize their games using AI.

Application

- Teaching basic game dev & AI
- Quick Game Prototyping
- Indie dev tools

- Creative Playground for designers

Future Scope

- Multiplayer Games
- Making games from scratch using natural language prompts
- User Profile and Save slots
